Forecast for Sunday 03 Apr 2022

Weather: Dry through the early hours with some clear spells or high based clouds, and a severe chill. A dry and bright start to the day but cloud will thicken late-morning, and rain or hill snow will move in from the northwest by the start of the afternoon, initially affecting the Nevis Ranges and Ben More, then spreading southeast. A very wet afternoon for all hills, with persistent heavy rain or hill snow giving drenching conditions, especially on northwest facing slopes, and widespread hill fog will give very poor visibility at times. Driest conditions will be across southeast Trossachs with mainly patchy rain. There will also be a risk of blizzard conditions for a time early afternoon, before snow transitions to rain, with strong westerly or southwesterly winds, strengthening to gales at elevation.

Chance of cloud-free hill tops above 800m: Greater than 90% until early morning. Lowering to 50% by early-afternoon and near zero chance from mid-afternoon.

Low Cloud and visibility: Good visibility until early morning with small amounts of low cloud with bases above the summits. Isolated cloud bases 600-800 m in the northwest by midday. Becoming moderate or poor visibility in the afternoon and evening due to rain and hill snow, and falling very poor in hill fog with widespread cloud bases 200-400 m.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View
There will be a significant contrast in the weather from morning to afternoon, with a multitude of hazards developing. Drenching conditions expected, further increasing the risk of severe chill.

Forecast for Monday 04 Apr 2022
Weather: Persistent rain will continue for much of the day, heavy at times in the morning across the northwest ranges. Slightly drier afternoon across the Trossachs and Ben Lomond, but predominantly cloudy and outbreaks of rain at times. Freezing levels lowering later will allow for summit snow towards the end of the afternoon. Strong or gale westerly or northwesterly winds.

Maximum wind: Westerly or northwesterly mean 40-45 mph gusting 50-60 mph.

Chance of cloud-free hill tops above 800m: Near zero increasing 30-50% by midday, with best chances in southeast.

Low Cloud and visibility: Moderate or poor visibility in the morning due to rain and hill snow, and falling very poor in hill fog with widespread cloud bases 200-400 m. Cloud bases lifting to 400-700 m in the afternoon with isolated hill fog, and visibility improving to good where rain eases.

Temperature: **Glens:** Plus 9 Celsius falling to plus 6.
At 800m: Plus 4 Celsius falling to zero Celsius.
Freezing level: Above summits, lowering 1000-1200 m.
